SUMMIT OVERVIEW

The Digital Nursing summit on Tuesday 15 March is a day of presentations and discussions dedicated to sharing best practice and innovation within nursing informatics and the digitally enabled nursing workforce.

An exciting agenda, curated by digital nurse leaders from across the UK, will explore how digital technology can advance nursing practice and improve patient care; highlighting the importance of both digital and data in cementing the future of nursing practice in a digital world.

Join us as we introduce the Guidance for Nursing on What Good Looks Like and explore the significant benefits which could be achieved through standardisation of nursing documentation.

You will hear from senior digital nursing leaders across primary, acute, community and mental health care settings, and patient perspectives, that will explore what the latest initiatives mean for the future of nursing practice in your organisation.

The summit also provides you with the opportunity to unlock the power of networking and immerse yourself in a culture of leadership and innovation. Explore the benefits of establishing a community of shared interest, support and learning; with contributions from established digital nursing networks that are leading the way.

Reasons to attend:

- A diverse programme curated by nursing leads, spanning all aspects of digital nursing.
- Hear from senior and regional leads, representatives across primary, acute, community and mental health care, and patients.
- Explore the opportunities provided by digital nursing programmes such as TOPOL, Shuri, Digital Academy and the Florence Nightingale Foundation.
- All sessions are CPD-accredited to help you develop in your profession.
- Meet, network and share ideas with fellow nursing representatives, digital scholarship fellows and network leads.
