

Keeping people at the centre:

**Being a Digital Aspirant Plus
Innovator**

Current monolithic IT is a major barrier to change

Provider capabilities need to scale

Traditional clinical and care models are being disrupted

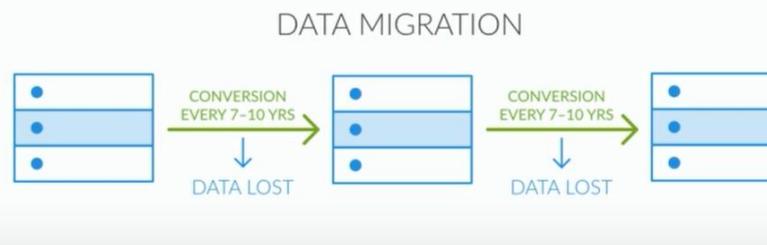

A new era of capability has rapidly evolved

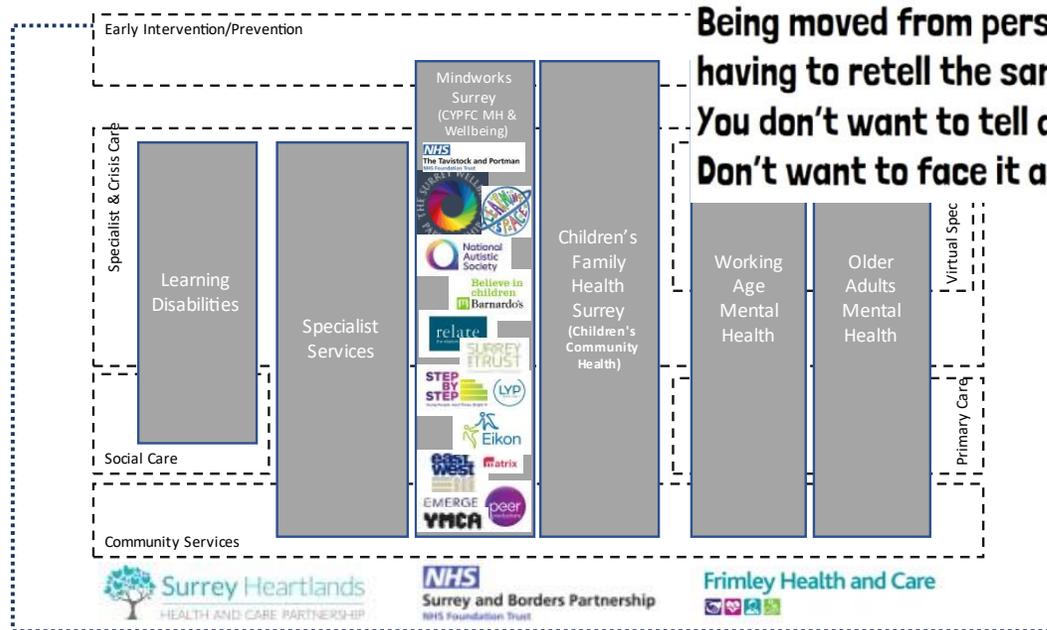

"My voice is important; I want professionals to listen to me and what I need" Age 14

"I want someone to really listen" Age 13

"I don't want to be just left on a waiting list" Age 16

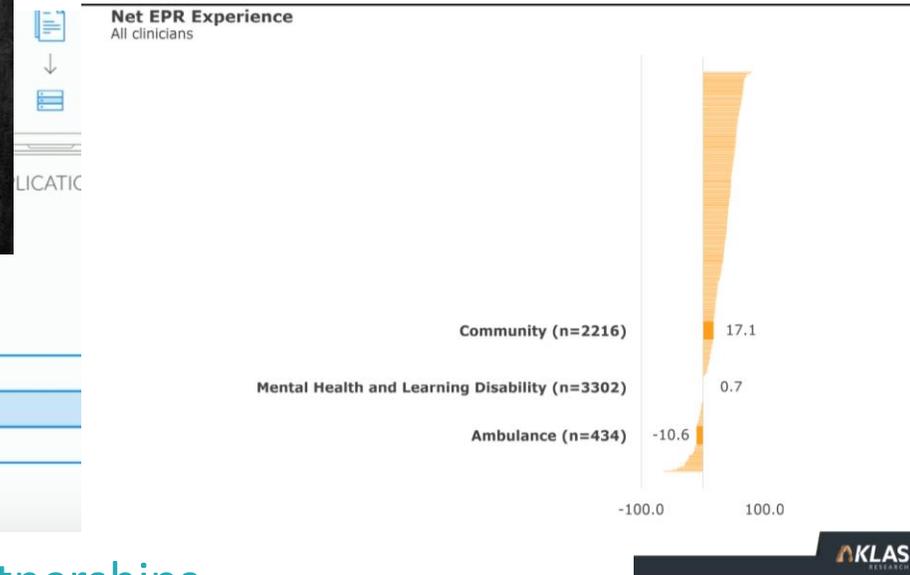

Explaining Our Services in Partnerships

Being moved from person to person constantly, having to retell the same story
You don't want to tell again
Don't want to face it again

Surrey and Borders Partnership
NHS Foundation Trust

Digital Aspirant Plus Programme (ADAPT)

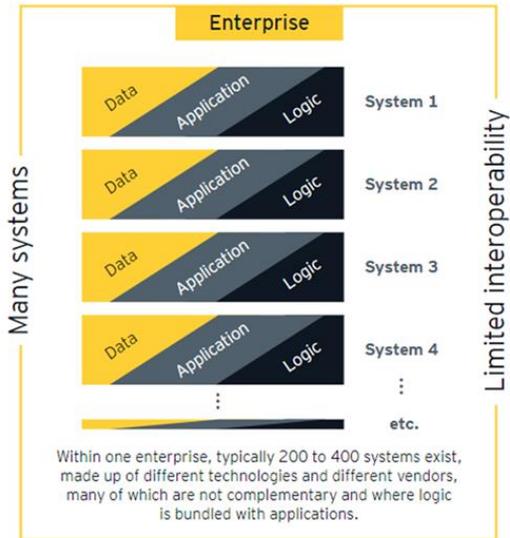

SABP is one of 7 Trusts selected by NHSX, and one of 3 Mental Health and Community Trusts (with Sussex and Humber) chosen as 'Innovators'.

Aim - to stimulate innovation in Electronic Patient Record (EPR) systems through 3 mechanisms:

- Opening up data schemas in established EPRs
- Developing architecture for separate Trust controlled persistent clinical data platform
- Creating Apps that use this source data – 'collect once, use often'

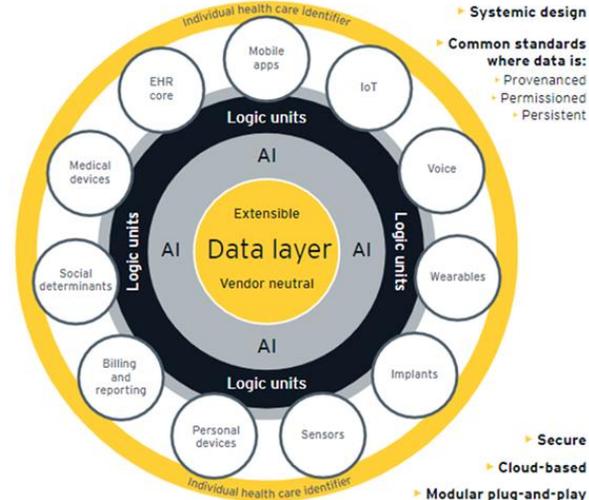

Persistent data platform - we're not alone in our thinking

Now

Present: Many systems all with intimately bound data logic and applications

In five years

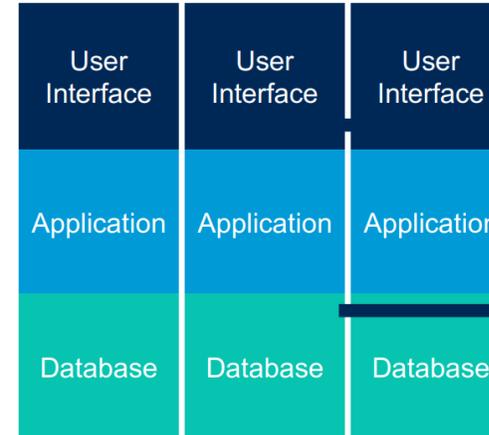

Future: A cohesive technology stack, giving a unified experience for clinicians, professionals and patients; unique data at the center accessed by applications in real time through micro-services

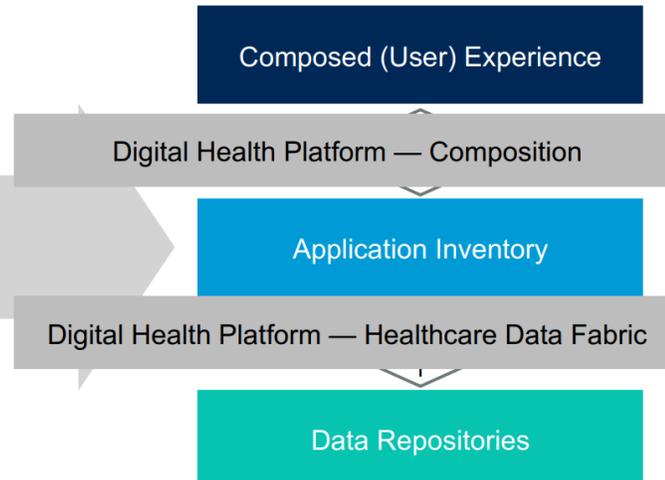

Gartner

Siloed Application Construction

Composable Approach

Gartner believes that truly effective and sustainable **open architectures** will need a capability for **vendor-neutral data persistence**, such as utilizing a common schema or set of **archetypes** and rules for managing **structured** and unstructured data (for example, a VNA, **openEHR** or IHE XDS repository). Providing open **messaging** standards (for example, FHIR, HL7) for data exchange in specific use cases will **only go so far** in meeting the architectural **challenges** of digital **citizen-centric** care delivery.

– Gartner Group

Healthcare Provider CIOs Need to Rally Their Enterprise Architects Around Citizen-Centric Care Delivery, 07 February 2017

“

Data is for life, not just for one system. If we consider that as a principle, we will design and procure systems differently.

Rachel Dunscombe
CEO NHS Digital Academy

Opportunities core to the way we think and work

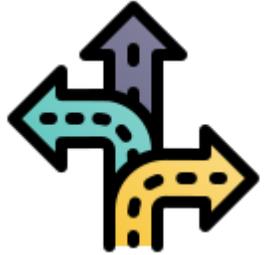

Opportunity to modernise and **future proof**

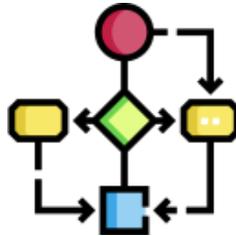

Shift towards health **promotion, diagnosis and early intervention**

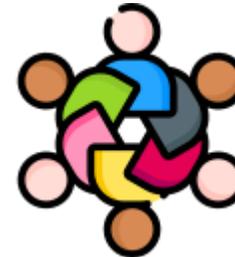

Digital as an enabler for **greater autonomy and choice** in care delivery

Need to **drive value** from local practices and pathways

#PeopleBeforeTechnology – **people at the centre** of how solutions are designed, built and run

Systems wrapped around people, providing the **best possible experience**

Approach to data: single source of truth, **collect once, use many**

Opportunity to **build on significant foundations** made throughout pandemic

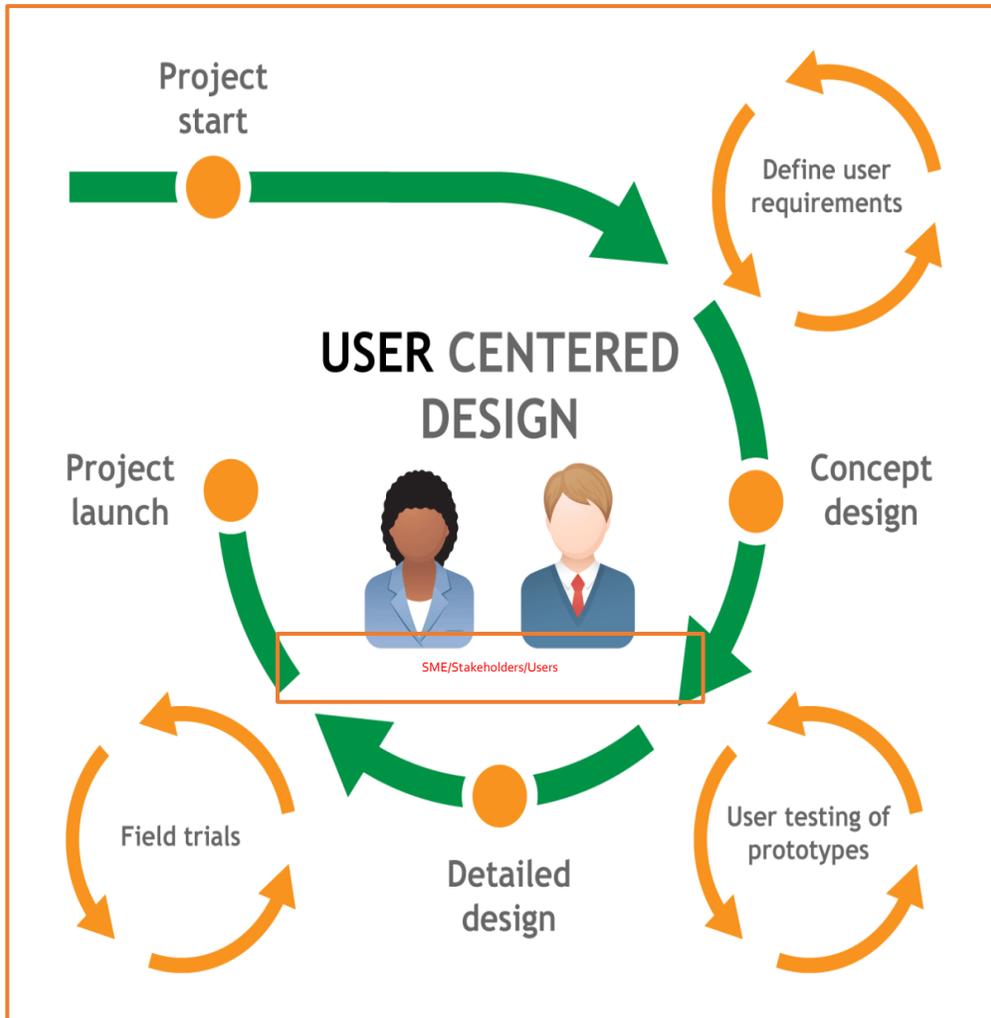

We need a **more dynamic capability** and build a future infrastructure that works

Introducing UCD and GSD changes things

User Centred Design

Good Service Design

1. Be easy to find
2. Clearly explain its purpose
3. Set a users expectations of the service
4. Enable each user to complete the outcome they set out to do
5. Work in a way that is familiar
6. Require no prior knowledge to use
7. Be agnostic of organisational structures
8. Require the minimum possible steps to complete
9. Be consistent throughout
10. Have no dead ends
11. Be usable by everyone, equally
12. Encourage the right behaviours from users and service providers
13. Quickly respond to change
14. Clearly explain why a decision has been made
15. Make it easy to get human assistance

Digital design completed by Thomas Blackburn

The Value of Doing it Differently

Care Delivery Models are Changing

ADAPT to the changes recognising person centricity

- Focus on Prevention and Early Intervention
- Integrate our Partnerships and collaboratives
- Drive the embedding of models (e.g. Thrive)

Technology & Data Innovation is Fuelling Change

ADAPT to threats and lean into opportunities

- Virtual Care (remote monitoring and selfcare)
- Predictive AI and Algorithms
- Automation
- Robotics

The Experience is Bad & the Legacy can't Keep Pace with the Change

ADAPT to iterating around developing needs

- Monolithic IT is a barrier to change & TCO is High
- We need to scale capabilities (IC)
- New tech era capabilities
